

PIPEBURST PRO

WHAT DOES PIPEBURST PRO OFFER?

WATER
MONITORING
SYSTEM

TRACKS
UNUSUAL
WATER
USAGE

MONITORS
TEMPERATURE
IN THE
FACILITY

SUPPORTS
REMOTE
VOLUNTEERS
AND
MANAGEMENT

FPMA and RSUI Indemnity believe this technology has the ability to significantly reduce claim costs associated with plumbing system failures. To encourage members to install the system, Holmes Murphy has partnered with PipeBurst Pro and Total Leak Concepts to extend an premium discount:

5%
ANNUAL DISCOUNT

WHY PIPEBURST PRO?

#1

Water damage is the most frequently reported claim in the FPMA Property Program

\$2.7 million

The total amount paid on water loss claims during a recent winter break

ADDITIONAL INFORMATION

With the combination of a Flow Meter, Ticker Valve, Valve Interface Panel and the ionleaks.com web interface any unintended water flow can be shut off automatically or manually. Freeze claims each year cost hundreds of thousands of dollars. Over 90% of these losses occur over the three week traditional winter break period when there is limited daily oversight of the facility further exacerbating the costs. While Pipe Burst Pro may not have prevented all losses, the extent of the damage would have been greatly diminished.

COST

Cost for installation of the system on the main water line would range from approximately \$2,000 for a 1" water line to \$4,000 for a 2" water line. (Price does not include installation.) The system can be set to provide online monitoring of water usage over holiday breaks. The system also allows a House Corporation officer to shut off the water with a simple online push of a button, or to set water flow restrictions to shut off the water if a certain number of gallons flow within a 30-minute window. Further, the product offers remote water monitors that can be used for monitoring unintended water flow from sinks, toilet, washers and dryers, water heaters or any other device using water within the chapter home.

CONTACT
